

New Electronics Upgrades

Customers using GPI Electronics have come to expect flexibility and adaptability in our Electronics Product Family. The full line includes simple-to-use, two-button displays to Remote and Local Transmitters with a variety of input and output options. As new applications develop, GPI responds quickly with product improvements including the following:

1

K-Factor Entry on Remote Transmitters With Display

GX500 shown here

GG and GX Model Transmitters are delivered ready for K-Factor entry. Calibration can be inconvenient in some applications especially when using sampling-type methods. GPI upgraded the following products to allow K-Factor entry.

- GG500 and GX500 upgrade.
- GG510 and GX510 NEW local mount transmitters.

2

GG500 Battery Powered Remote Pulse-Out Transmitter

The GG500 upgrade allows for Sine Wave input. Previously Sine Wave input was available on models GA500 or GX500. This is the meter of choice for applications requiring pulse output from a remote unit with the GPI display.

This upgrade allows the GG500 to be used with G Series, G2 and A1 meters in addition to the Oval Gear Series. Changes to the electronics board make wiring even easier.

Order models GG500 and GX500 in hour or minute versions.

3

NEW GA510, GG510 and GX510

GG510 shown here mounted on GSCPS Sanitary Meter

GA510, GG510 and GX510 are new local mount transmitters from GPI. The GG510 model comes battery powered with an external power option. Models GA510 and GX510 are loop powered.

GG510

GA510

For mounting to the popular G2 Series, use the Conduit Connector featured in this catalog.

Selecting the Right Electronics

Different electronic choices can help you create a complete system to monitor liquid flow. Key to selecting the correct Electronics is a review of the end-user application. Application depends on many factors: fluid type, flowrate, line size, temperature and accuracy required.

Contact GPI Customer Support if you need assistance evaluating the best GPI product to meet your particular applications.
